

Utility Relocation & Early Works

June 2011 - December 2012

Early works and utility relocation along the Eglinton Avenue corridor are underway, clearing the way for tunnel boring and surface construction to follow.

Municipal and private utilities (water, gas, telecom, hydro) are being identified and relocated in advance of the tunnel boring launch shaft and surface guideway excavation.

This phase follows the November 2011 announcement targeting a 2020 revenue service opening for the Eglinton Crosstown LRT.
