

Surface / At-Grade Station Construction

January 2014 - June 2020

Surface stop construction is proceeding along the western and eastern at-grade sections of the 19km alignment, part of 25 total stops and stations on the line.

This work runs in parallel with the underground tunnel and station program, since at-grade stops do not depend on tunnel completion.

Platform, shelter, and streetscape work is being coordinated with the City of Toronto along the surface right-of-way.
