

Tunnel Boring - Central Underground Section

June 2013 - August 2016

Tunnel boring machines 'Dennis' and 'Lea' were launched in June 2013 from the Black Creek Drive / Eglinton Avenue West launch shaft near Keele, boring westward.

The twin 10km bore tunnels forming the central underground section of the alignment were completed in August 2016.

Completion of tunnelling unblocks underground station excavation and structural work at each of the underground stops along the bored section.
